Hello passkeys! Goodbye passwords

SWISS CYBER STORM 2022

Agenda

FIDO authentication and today's challenges

What is a passkey?

Security spectrum

User experience

Enterprise & high-value consumer use cases

FIDO authentication and today's challenges

FIDO authentication crash course

client / platform

roaming (external) authenticator

platform (internal) authenticator

WebAuthn

relying party

FIDO authentication challenges

roaming authenticators

- ... cost money (and you probably need two)
- ... are needed to securely bootstrap a platform authenticator

consumers

- ... are not interested in buying them and carrying them around

“FIDO”, “WebAuthn”, “security key”

- ... don't mean much to the average user

What is a passkey?

The vision

- Easy to use as a password
- Easy to understand, intuitive
- Leverages existing hardware
- Survives device loss/change
- Works at global scale

passkey

pass·key | / 'pas,kē /

noun

a password replacement that is safer, easier and faster to use

a password

a passkey

passwords

passkeys

friends & family
edition

passkey

use your fingerprint or face
to sign into apps and websites instead of a password

tech savvy
edition

passkey

a phishing resistant, password replacement
FIDO credential, usable across all your devices

technologist
edition

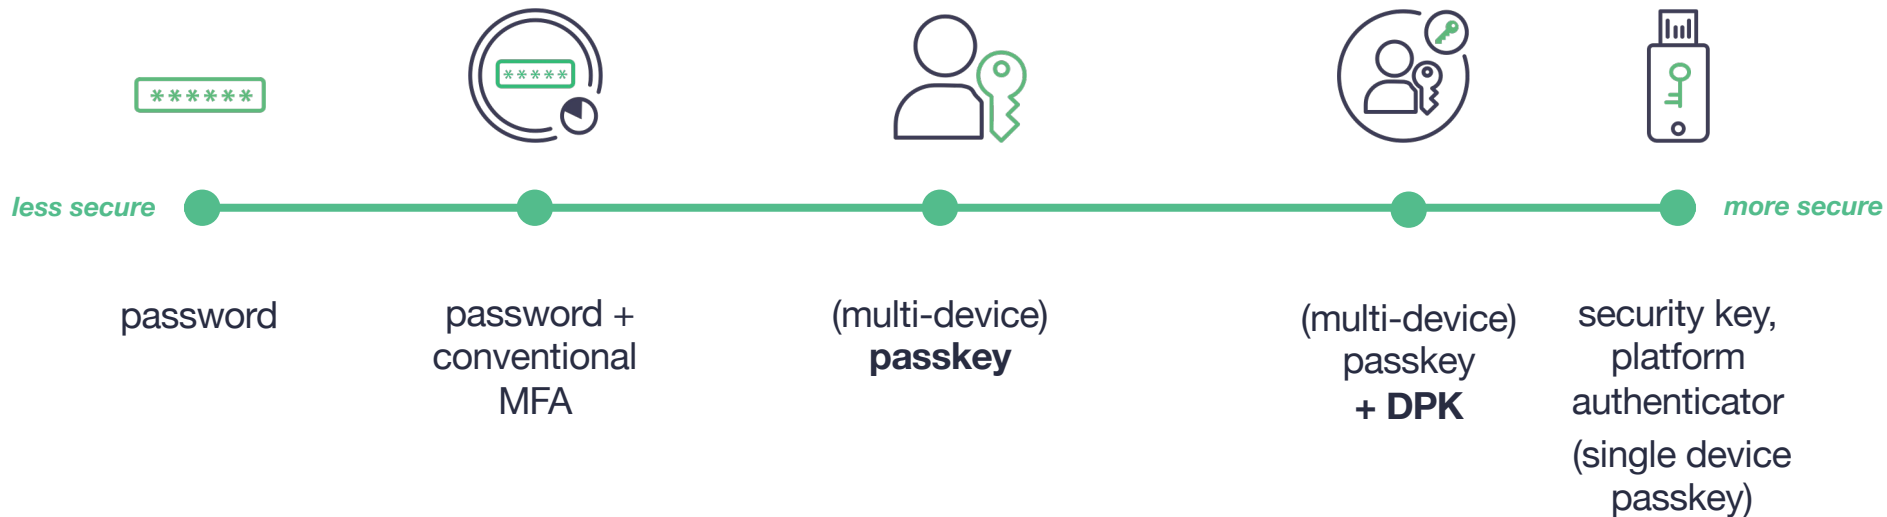

passkey

a FIDO2 discoverable credential which requires user verification
and is backed up to survive device loss

Security spectrum

Security spectrum

User experience

Inspiration from existing password manager UX

- Familiar experience
- UI/UX support by the platform
- Privacy preserving
- Simple integration for website developers

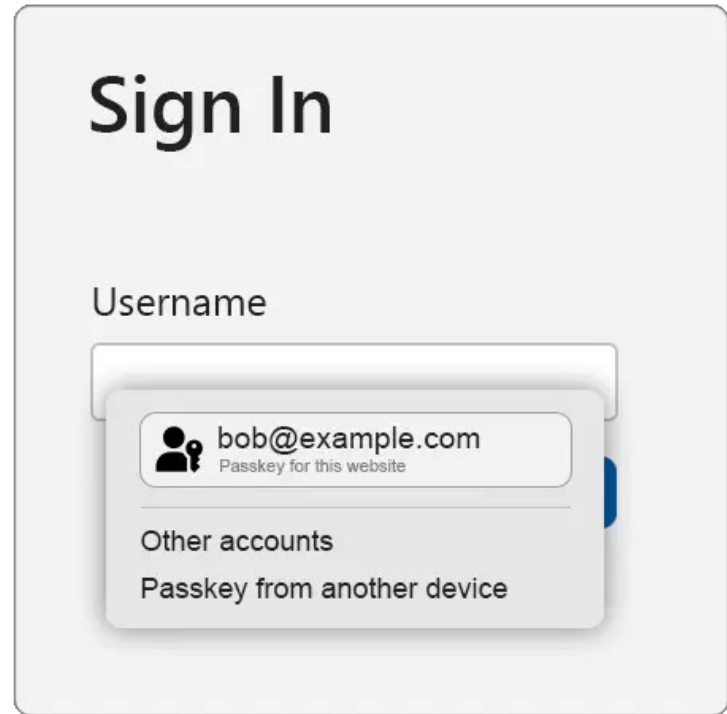

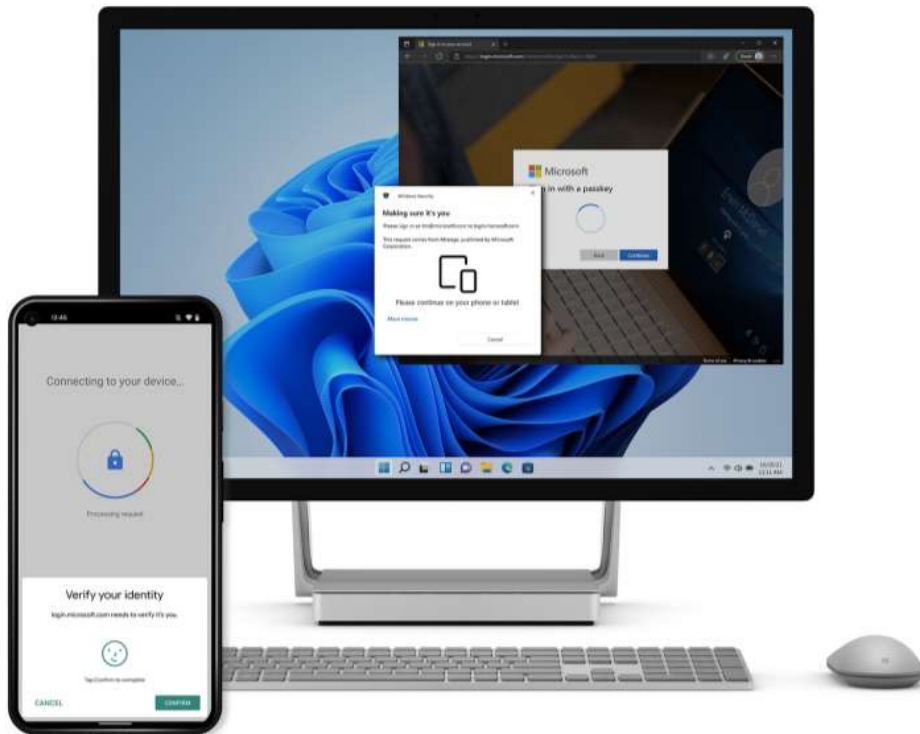

Image source: passkeys.dev

Cross-ecosystem experience

Cross-device,
cross-ecosystem
FIDO authentication

1. Access site/app on new device
2. Use mobile device to sign in
3. Create new passkey on the new device

mobile device can
bootstrap another
device and/or
ecosystem

Concept render only, UI subject to change

Image source: FIDO RSAC/Authenticate presentations

Enterprise & high-value consumer use cases

Higher security use cases

regulated industries
(financial, government, healthcare, ...)

politicians, journalists,
executives,

...

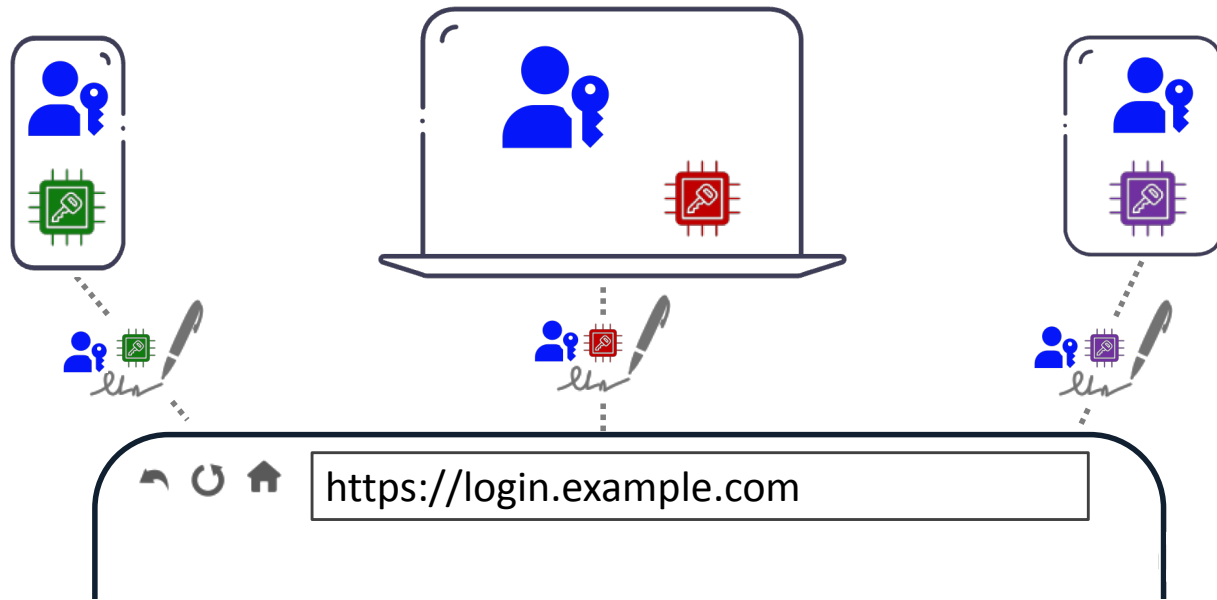

enterprise access

Device public key (DPK)

per relying party, device bound key
in addition to the passkey

Adapted from: FIDO RSAC/Authenticate presentations

Not addressed directly by passkeys

Cloud-based cross-ecosystem syncing

... third-party solutions

Payment confirmation

... Secure Payment Confirmation → www.w3.org/TR/secure-payment-confirmation

Takeaways - passkeys

drop in replacement
of passwords,
enhanced security

cross-platform,
cross-ecosystem

familiar UX

device context for
higher security cases

Hello passkeys!
Goodbye passwords...?
